PREFACE

This Mission Coverage Index (MCI) furnishes a listing of intelligence targets covered by Mission 9032. Items in the listing are arranged (1) by country, (2) by WAC area within the country, and (3) by coordinates reading from south to north and from west to east. An explanation of column headings and photo reference data used in presenting the information is contained in the appendix.

For the convenience of the user, a subject index to the intelligence targets has been included following the listing. Targets in the subject index are listed (1) by category, (2) by country within each category, and (3) alphabetically by place name within each country.

The user of this MCI is cautioned that the scan of photography from Mission 9032 was accomplished in a relatively short time and often without the aid of precise analytical and mensural equipment commonly employed in detailed photographic analysis. Consequently, although the information presented herein is essentially accurate, future detailed analysis may somewhat alter portions of the information.

SUMMARY

Mission 9032, accomplished during the period 18 April through 20 April 1962 provided 24 photographic passes over the Sino-Soviet bloc. Utilization of a forward and an aft camera provided stereoscopic coverage. Approximately 45 percent of the coverage is cloud free. The average scale of photography at the center of the format ranges from approximately 1:462,000 at 70° N to 1:361,000 at 30° N for the descending passes and 1:661,000 at 50° N to 1:554,000 at 70° N for the ascending passes.

Installations of special interest seen for the first time in the Soviet Union on this mission include the Drovyanaya, Perm', Svobodnyy, Tyumen, and Yedrovo ICBM launch complexes, additional launch facilities at five previously identified ICBM launch complexes and the Kapustin Yar/Vladimirovka Missile Test Range, 17 confirmed and 2 possible MRBM launch sites, a SAM training center near Kordon, 81 SA-2 and 5 SA-3 SAM sites, 28 SAM support facilities, and 4 unidentified-type SAM sites.

APPENDIX
EXPLANATION OF COLUMN HEADINGS
AND PHOTO REFERENCES

City, Installation -- This column contains the name of the city or town nearest the installation, followed by the name of the installation. If the name of the installation is not known, it is titled according to its function. The city and installation names are followed by a capsule description, where appropriate. Distances to installations from referenced cities are determined from the center of the cities.

Coordinates -- Coordinates for all installations are for the minute square in which the reference point is located. Where the subject installation covers a wide area, coordinates are given for the approximate center of the installation.

WAC -- This column provides the World Aeronautical Chart number for the area in which the subject installation lies.

Installation Numbers -- The Installation Numbers column is divided into two subcolumns. The first subcolumn lists, when known, the BE installation number assigned to the target. The second subcolumn lists the installation number assigned by NPIC. Installation numbers, when used to reference an item, should be prefixed by the appropriate WAC number, since installation numbers are repeated from WAC to WAC. For example, there is an NPIC target numbered 0153-1 and an NPIC target numbered 0154-1. In each instance, the NPIC installation number is 1, but the installations appear on different WACs.

The photo reference provides the ascending and/or descending pass(es) and forward and/or aft frame(s) on which the target appears, and indicates conditions which affect interpretation of the target. The reference also provides Universal Reference Grid (X-Y) coordinates to aid in pinpointing the target on the photography. These grid coordinates follow the frame to which they apply.
